ecopro coat™

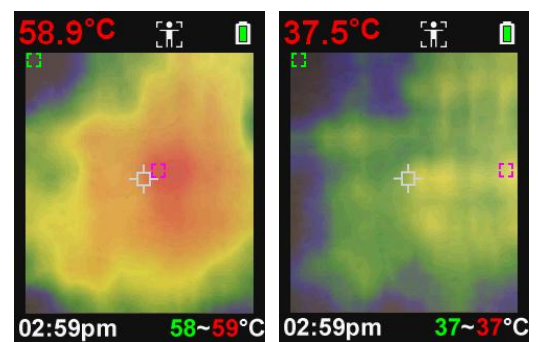

Ecopro Coat is a revolutionary heat-reflective coating, proudly engineered to set new standards in energy efficiency and sustainability. This innovative coating is designed to combat the heat absorption of outdoor surfaces, offering unparalleled benefits in both residential and commercial applications.

Ecopro Coat reduces surface temperatures by 15°-20° degrees during day time, ensuring a cool interior even under the hottest sunshine.

Concreeet substrate

Ecopro Coat's effectiveness has been scientifically proven through rigorous experiments. High-precision measurements were taken on different substrates' outer and inner surfaces, as well as the inner space, using R S I Technologies' real-time automated testing system.

Why Choose ecopro coat™ ?

Advanced Heat Reflection:

Ecopro Coat's advanced formula cuts solar heat absorption, keeping surfaces cooler.

Energy Efficiency:

By reflecting sunlight and reducing heat absorption, these coatings can significantly lower cooling costs in buildings up to 35%.

Extended Roof Life:

Lower temperatures can reduce thermal stress on the roofing material, potentially extending the roof's lifespan.

Environmental Impact:

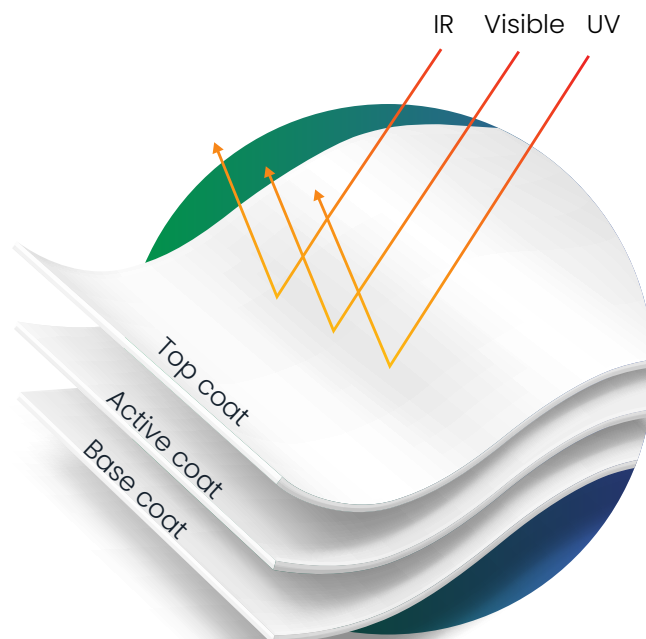

Reduced energy consumption leads to lower greenhouse gas emissions, contributing to environmental sustainability.

Enhanced Comfort:

Buildings with heat-reflective roofs tend to have more stable and comfortable indoor temperatures.

Defying Heat in Action:

ecopro coat™

Application:

Use a brush, roller, or spray.

- Water Tanks
- Containers
- Agricultural Structures
- Data Centers
- Factory Buildings
- Residential Buildings
- Commercial Roofs
- Sun-facing Walls

Contact us today to discover Ecopro coat's benefits. Let's create a cooler future together.

ecopro coat™

Advanced Heat Reflective Coatings

Trusted Japanese Brand

Green Product

Heat Reflective

Thermal Insulative

Waterproof

Antimicrobial

Triple Layer Revolution:

Concrete | Metal | Masonry | Asbestos | Tiles

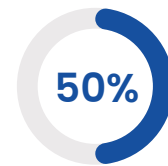

Primer (base) coat

Protect the other layers, water proofing, dust proofing and antimicrobial

Energy Saving

Money Saving

Active coat 200 micron

Reflect 90% of UV, Visible and IR radiations, Thermal insulation and radiative cooling

Top coat

Seal and water proof the surface, Create strong adhesion

- Up to 20°C surface temperature reduction
- Less than 120 LKR
- 2 + years durability
- Chemical and mechanical resistance
- ROI in less than 10 months
- Apply on almost any surface

ecopro coat™

Advanced Heat Reflective Coatings

Concrete | Metal | Masonry | Asbestos | Clay
Tiles | Plastic | PVC | Rubber | Polythene

How to apply

Step 01 - Prepare and clean the surface to the perfection

Step 02 - Apply Ecopro Coat - Primer on the surface

Step 03 - Apply Ecopro Coat - Active on the surface (Double coat)

Step 04 - Apply Ecopro Coat - Top as the finishing touch
